b) Enabling Multi-Factor Authentication to Secure Your Access

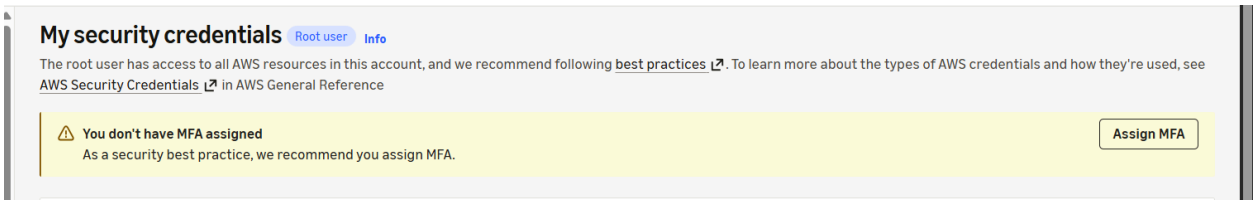

Step1: Open and sign in to AWS using root user

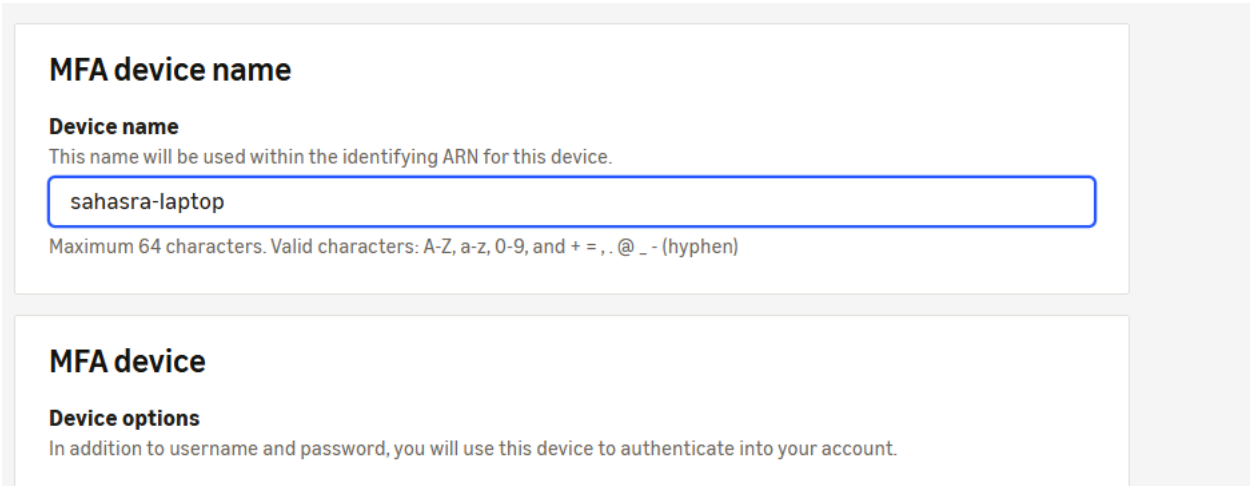

Step 2: click on the profile or username

Step 3: Click assign MFA

Step 4: Enter device name and select passkey

Passkey or security key

Authenticate using your fingerprint, face, or screen lock. Create a passkey on this device or use another device, like a FIDO2 security key.

AWS recommends using a passkey or security key as an MFA device as they provide the most protection against attacks such as phishing.

Authenticator app

Authenticate using a code generated by an app installed on your mobile device or computer.

Hardware TOTP token

Authenticate using a code generated by Hardware TOTP token or other hardware devices.

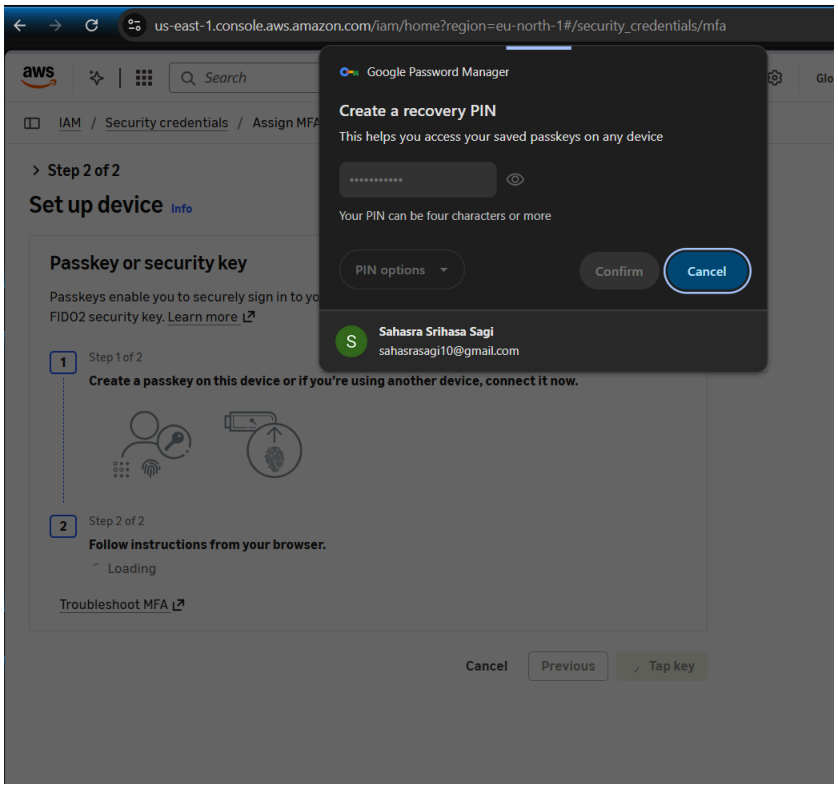

Passkey display name - *Optional*

This name will be shown when signing in using passkey. The default suggested name can be customized if needed.

Use default Passkey display name

433617670615-root-sahasra-laptop

Maximum 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)

Step 5: MFA is created
